Application Period Opens, Delta Presents to KSE Deans, and Other Updates from July 2026

The Delta Engineering program at Kyiv School of Economics (KSE) has just over a month until its inaugural semester. This July, the Delta team hosted their final admissions events of the season, and they reconnected with KSE leaders.

Presenting the Curriculum

On July 15, the Delta Engineering team presented a substantial plan for their new undergraduate program. KSE deans, academic directors, and others were in attendance.

Delta faculty showed how their program will create engineers who can define problems, design solutions, and take responsibility for real systems. They described the courses that they had designed with input from Olin faculty, such as Quantitative Engineering Analysis, Bio-Inspired Design, and Innovative Design. They explained how each course uses project-based learning, connections to the real world, teamwork, and co-design. Partner-students testified about their role in the program's development. One partner-student expressed, "it's a good feeling — waking up every day, wondering, *what will I create?*"

The presentation led to meaningful discussion. The team will continue sharing their curricular model with the KSE community in the next academic year. Delta faculty are excited to discuss pedagogy and create deeper bonds with other KSE faculty during faculty-wide training sessions in July and August.

Conversations after the Delta presentation

Applications officially begin through Ukrainian national web portal

In Ukraine, applying to college is done via a centralized system owned by the Ministry of Education. The entire process is public. It can be tracked online, including student test scores, applications, and more. This year, applicants are going through these steps:

- **The NMT:** *(May 20 – June 25)* Applicants take the National Multi-subject Test (NMT), a standardized admissions test for higher education. NMT results are available in early July.

- **Applications:** *(July 19 – July 31)* Applicants use the Ministry web portal to apply to higher education institutions. They rank their top ten choices.

- **Placement Algorithm:** *(Early August)* The Ministry executes an algorithm to determine who qualifies for each program. They consider NMT scores, college-specific entry requirements, regional preferences, and more. In Ukraine, the Ministry of Education funds some seats (called budget seats) for students at private and public higher education institutes. The number of budget seats for incoming students varies yearly for each program. The Ministry decides who is recommended for each budget seat as part of the placement algorithm.
