48+ Students Enroll in Delta Engineering, Classes to Begin in Temporary Facilities

Delta Engineering at Kyiv School of Economics (KSE) was proud to receive more than 100 applicants for their inaugural class. That's more than triple the amount received by any of KSE's seven other undergraduate programs in their first semesters. In response, KSE expanded Delta's incoming class size from 29 to around 50. Now, Delta faculty and staff have two weeks to finalize course plans and prepare spaces for a bigger-than-expected incoming class.

Temporary buildings

In true Olin fashion, Delta Engineering will start classes in temporary, modular buildings.

"You didn't have to copy us completely!" exclaims Olin professor Lynn Andrea Stein during a weekly check-in. She recounted how Olin College also started in temporary, modular buildings in 2001. The "pod" year became legendary as a fun and innovative time at Olin.

Kyiv School of Economics is in a period of growth in terms of programs, students, and spaces. Including their acquisition of the Obolon Golf Club complex in 2025, they've invested in buldings for student housing, labs, and more.

The permanent classroom spaces for Delta Engineering won't be ready when classes start in September. Delta will operate out of temporary facilities. In August, KSE put up three modular classroom buildings. They'll be shared with other undergraduate programs. Delta also has some semi-permanent studio space in the basement of a KSE building, which doubles as a bomb shelter.

48+ students enrolled

Delta Engineering had been aiming for 29 students. Before applications began, they were praying they would even find 20 willing students.

Then, Delta Engineering received over 100 applicants, and the conversation changed. Instead of wondering, "will we meet our quota to operate?" they began asking "how do we respond to so much interest?"

As of the time of writing, 48 students are enrolled for Delta Engineering, after KSE allocated around 20 additional seats to them.

The volume of applicants speaks to the success of Delta's participatory recruitment process. In Ukraine, there is emergent interest in Delta's vision. Delta Engineering is an experiential, impact-oriented, and interdisciplinary program. It's unique in Ukraine, where most institutions deliver

engineering education through traditional pedagogy. Delta faculty and staff shared the vision throughout the summer online and on campus at Engineering Challenge Days.
The sibling program to Delta Engineering — Engineering for Innovative Manufacuring sponsored by Fire Point — enrolled 22 students for September 2026.

The first semester curriculum

Delta Engineering is now considering whether they should teach one, two, or three sections of each class this fall. Delta students will take four courses in their first semester: Bio-Inspired Design, Quantitative Engineering Analysis, N+1 Inventions that Changed the World, and English.

Throughout the partnership, Olin faculty coached Delta faculty and provided opportunities for pedagogical training and course observation. An Olin faculty recently spoke about the partnership, saying:

> *KSE isn't just snapping to the grid; they're doing something different than the standard engineering curriculum. They're also doing something different from Olin, since they have a unique circumstance and vision. I'm amazed by their resilience and their focus on the task at hand.*

Delta Engineering orientation begins September 1 and classes begin September 7.
